

4.5 Per-atom gate against the base model, w = 2, 10,000 samples each

◆ reference: base model ● differs from the reference ○ does not: the 95% interval of the paired difference includes zero

Error bars: 95% bootstrap intervals over the 10,000 samples of each row (1,000 resamples). Differences are tested one at a time, without a correction for the number of rows.
